Cloud Service Description (200 words or less)

For the past 30 years, TimeClock Plus® (TCP) has provided robust time and attendance solutions to its customers, offering innovative timekeeping systems to control labor cost and efficiently manage attendance policies. The organization's employee time management systems are available in many configurations to meet the diverse needs of organizations across the country.

TCP's core service is providing a cloud-based, time and attendance platform that can import a variety of data types, including but not limited to personally identifiable information (PII) and biometric data. The organization provides Apple and Android based smart phone applications for their customers to input time and attendance data and access TCP reporting, and the organization also manufactures legacy time clock appliances. The TCP webpage has linked pages for contacting technical support, accessing the TCP knowledgebase, seeing TimeClock Plus system availability status, and taking webinar trainings.

Certification Status

Level 2 Certification
