

Open API

The Open API feature in TimeClock Plus enables customers to configure and manage integrations autonomously, empowering them to mine rich reporting analytics, automate processes to remove manual intervention, and support system security.

Key benefits

- **Eliminate manual intervention and reduce risk of human error** by automating the push and pull of data between systems and enable reporting in third party platforms.
- **Empower your organization** with self-serve capabilities to create your own integration and hand-pick data points.
- **Facilitate secure and tailored data synchronization between systems**, safeguarding sensitive employee data and minimizing risks while allowing for a personalized integration.

[Developers can check out our self-service API documentation here!](#)
