## GEO-LOCATION

v7

Precisely manage your workforce's clock operations by enabling geo-location which uses existing location services available on your employee's mobile phones available in androids and iOS. This feature enables you to track where your employees are clocking in/out, going on break, and restricts clock operations outside of set up geo-fences.

### TRACK EMPLOYEE OPERATIONS

- View employee clock operations via a google maps view, the clock operation location will show as a pin on the map
- Associate employee timesheet entries with geo location punches and view them in the individual or group hours tab
- Geo-locations are accurate within a 10 yard radius
- Track or restrict exceptions when clock operations happen outside the allowed geo-fenced radius
